

Alexey Ogarkov

Principal Software Engineer · Frontend & Developer Platforms

Berlin, Germany · alexey.ogarkov@gmail.com
github.com/alexogarkov · linkedin.com/in/alexeyogarkov

Hands-on technical leader focused on frontend and developer platforms. I identify systemic engineering problems, build the first implementation, prove the pattern and turn it into reusable, self-service capabilities.

EXPERIENCE & PLATFORM CONTRIBUTIONS

Deutsche Bank

Feb 2012 – Present

Director · Principal Software Engineer

Hands-on platform engineering and technical leadership for Autobahn, from stabilization to shared frontend and developer capabilities used by approximately 300 engineering teams.

Joined leading a small indicative market-data application team; moved to Autobahn approximately nine months later.

Assistant Vice President: Feb 2012 – Jan 2017 Vice President: Jan 2017 – Mar 2020 Director: Mar 2020 – Present

- **Frontend modernization.** Drove React modernization through a self-service application framework and design system, including Figma variables, CDN delivery, authentication, compliance, shared state, diagnostics and notifications. Made WCAG accessibility and bundle-size discipline platform requirements.
- **Microfrontends.** Defined and implemented the microfrontend foundation, with platform APIs and JavaScript/CSS isolation. Originated the ongoing architectural transformation toward a unified Corporate Bank client portal from dozens of payment and transaction portals.
- **Plexus Interop.** Architected, developed and delivered the web implementation of Plexus Interop, connecting 100+ Deutsche Bank applications across technologies. Open-sourced through FINOS; upstream is now archived. github.com/finos/plexus-interop
- **Developer infrastructure.** Personally migrated the first 10 repositories to GitHub and established reusable Actions/workflows integrating CI/CD, review, security and bank-wide SDLC controls. ~100 repositories form the next wave with the wider team. Deployed the first Argo CD projects to establish GitOps patterns.
- **Mobile foundation.** Developed the original Objective-C Autobahn iOS container, the shared base for client-facing and internal apps including Autobahn FX. Later rewritten in Swift by other engineers.
- **AI enablement.** Experimenting with design-system-grounded AI skills for text → Figma → code. Personally piloting Autobahn Project Memory: graph-based knowledge and RAG across code, infrastructure and network context.
- **Engineering leadership.** People-management responsibility across 20+ engineers and ~6 direct reports, including hiring, performance reviews, promotions and career progression.

INDEPENDENT PRODUCT

Lorely

Public beta

Founder & sole developer · getlovely.com

Founder and sole developer of Lorely, a native iOS reading product in public beta. Own Swift/SwiftUI app, backend, AI enrichment, infrastructure, observability, deployment and product decisions. Use AI coding agents/Codex as an engineering multiplier.

EARLIER EXPERIENCE

Sperasoft

Nov 2008 – Feb 2012

Team Lead

Led about seven engineers while remaining primarily hands-on in full-stack engineering, with client-facing planning and requirements discussions.

- BioWare / EA client work: REST services for guilds and items in Star Wars: The Old Republic.
- Automated test orchestration for a Sony portal and engineering on an MMO project for children.

YumaSoft

Sep 2007 – Nov 2008

Java Developer

Worked on client project Laplink Everywhere, enabling web and mobile access to a user's local Outlook/Exchange data and calendar.

- Java, JavaScript and some Flex across the product.

TECHNICAL EXPERTISE

Languages	TypeScript · JavaScript · Kotlin · Java · Swift · Python
Frontend & platform	React · Microfrontends · Design systems · WCAG accessibility · Performance & bundle size · Application interoperability
Mobile	Swift · SwiftUI · Objective-C (historical production)
Developer infrastructure	GitHub Actions · CI/CD · Argo CD · GitOps · CDN delivery · Authentication integration · Logging & diagnostics
AI engineering	AI coding agents · AI skills & tooling · RAG · Graph-based knowledge systems

EDUCATION

Saint Petersburg State University

2004 – 2009

Computer Science and Applied Mathematics
Faculty of Mathematics and Mechanics
